DETAILED ACTION

EXAMINER'S AMENDMENT

1. The application has been amended as follows: in the Specification Preliminary Amendment filed on 17 July 2003, page 2, line 4, after the year "2001" insert --- , now U.S. Patent No. 6,744,379 ---

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: there are no prior arts teaching or suggesting of an apparatus and method for a user control in selecting the display of radar data for two or more vehicles comprising:

a front select control allowing the user to select radar data for vehicles traveling in front of an observation point;

a rear select control allowing the user to select radar data for vehicles traveling behind the observation point;

a same lane select control allowing the user to select radar data for vehicles traveling in a same lane relative to the observation point;

an opposite lane select control allowing the user to select radar data for vehicles traveling in an opposite lane relative to the observation point, and

wherein a user-readable display generates radar data for vehicles in one or more user-selected areas of view based on user selections from the front select control, the rear select control, the same select control, and the opposite lane select control.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Aker et al discloses a police traffic radar using FFT processing to find fastest speed and control the first, second and third display windows to display a front, rear, same or opposite traveling vehicle according to detection of the strongest and/or fastest speed of an approaching vehicle. [US 6,580,386], [US 6,198,427], [US 5,691,724] and [5,525,996]

Morgan et al discloses a police vehicle includes a system with a user interface device, which is a touch-sensitive screen/display to provide control commands for individually modifying the light bar, siren subsystem or the video subsystem. [US 6,411,874]

Jones discloses a Doppler based traffic radar system determining a speed of a moving target. [US 6,400,309]

Goodson et al discloses a multiple parameter Doppler radar system that is controlled by a microprocessor to perform quality determinations on the data derived from the signals to assess the reliability of the data even in a multiple target environment prior to displaying the parameters of target motion. [US 4,740,045]
